

Reduce pain and promote collagen production with

# Red Light Therapy

**NOVOTHOR**

## HOW RED LIGHT THERAPY WORKS

BEFORE

AFTER

BEFORE

AFTER

Wrinkles, sagging, thinning, loss of volume? If you checked yes to any of the boxes associated with aging skin, The Renewal Center can help.

Supporting your skin, the largest organ, has come a long way over the years. Today, there are many options available to consumers which mask the effects of aging such as injecting toxins, undergoing painful procedures that require downtime and lathering on expensive topicals- none of which address the root cause of skin aging- our collagen production! Red Light Therapy is one of the most well researched, scientifically backed ways to stimulate collagen production and is completely non-invasive, relaxing, and deeply healing in many different ways.

Collagen is produced by our body throughout our lifetime via our cells fibroblasts, however the production gradually becomes slower and slower with age and can be further reduced by environmental pollutants, stress, sun damage, and diet. Red Light therapy amps up our natural production of fibroblasts, increases circulation and reduces inflammation within our cells. These compounding effects increase the amount of collagen and result in higher skin hydration, strength, elasticity, a reduction of fine lines and wrinkles and even a smoother more even toned appearance.

During one study\*, collagen density was measured using collagen ultrasonography scans before and after a series of red-light therapy treatments. The results pictured demonstrate a significant increase in collagen.

The Renewal Center offers your choice of 3 different red light therapy devices including our Novothor whole body pod, all of which harness the power to transform your skin and rewind the collagen clock!
