

6 Reasons Why People Love LED Light Therapy

Acne:

LED light therapy works by killing acne-causing bacteria at the source, deep beneath the skin's surface. Blue LED light, especially in combination with red light therapy, emits specific, clinically-proven wavelengths of light to trigger an all-natural effect in human tissue, killing acne-causing bacteria, decreasing inflammation, and improving skin tone, texture, and clarity from the inside out.

Recovery is quicker post-workout

Kills bacteria and reduces redness associated with acne

Reduces signs of aging

Aging Skin:

Proven red and near-infrared wavelengths are utilized in the Celluma SERIES of LED light therapy devices to combat the signs of aging. These specific wavelengths of light energy are clinically verified to enhance your body's natural ability to generate collagen and elastin by activating the fibroblast cells. Fibroblast cells are responsible for producing collagen and elastin, the two most common proteins in connective tissue. And if you don't already know, lower levels of collagen lead to breakdowns in cartilage which can cause inflammation, soreness, stiffness, arthritis, and prolonged recovery time after physical activity.

Targets muscle and joint tissue to alleviate pain

Reduces patient downtime*

Promotes hair growth

Pain Management:

With Celluma's light therapy technology and unique body contouring device design, you can target muscle and joint tissue to alleviate pain, increase circulation and decrease inflammation. You can also regain and maintain your body's natural vitality without the need for prescription drugs and their dangerous side effects, leading to long-lasting, life-improving pain management you can rely on.

Hair Growth:

Light therapy compliments currently existing treatments and procedures (drugs, PRP, stem cells, transplant surgery) to enhance an individual's outcome for maximizing hair growth.

*Wound Healing:

Celluma is not FDA-cleared for wound healing. The Celluma is medically CE-Marked in Europe for all FDA indications-for-use as well as for Dermal Wound Healing as a Class 11A medical device in the European Union. Ideal for use following surgery to enhance healing of incisions or non-healing wounds, Celluma LED therapy can help reduce patient down-time and fight infection while increasing overall patient satisfaction.
